`<object>` elements have alternate text

Low-contrast text is difficult or impossible for many users to read. [Learn more](#)

## Failing Elements

### BEST PRACTICES

The document does not use `

Low-contrast text is difficult or impossible for many users to read. [Learn more](#)

### NAVIGATION

`[accesskey]` values are unique

Low-contrast text is difficult or impossible for many users to read. [Learn more](#)

Heading elements are not in a sequentially-descending order

Low-contrast text is difficult or impossible for many users to read. [Learn more](#)

### ABOUT US

Fix any of the following: Heading order invalid

### TABLES AND LISTS

`<dl>`'s contain only properly-ordered `

` and `: ` groups, `

`<th>` elements and elements with `[role="columnheader"/"rowheader"]` have data cells they describe.

Low-contrast text is difficult or impossible for many users to read. [Learn more](#)

Passed audits

`[aria-*]` attributes match their roles

Each ARIA `role` supports a specific subset of `aria-*` attributes. Mismatching these invalidates the `aria-*` attributes. [\[Learn more\]\(https://web.dev/aria-allowed-attr/\)](https://web.dev/aria-allowed-attr/).

`button`, `link`, and `menuitem` elements have accessible names

When an element doesn't have an accessible name, screen readers announce it with a generic name, making it unusable for users who rely on screen readers. [\[Learn more\]\(https://web.dev/aria-name/\)](https://web.dev/aria-name/).

`[aria-hidden="true"]` is not present on the document `<body>`

Assistive technologies, like screen readers, work inconsistently when `aria-hidden="true"` is set on the document `<body>`. [\[Learn more\]\(https://web.dev/aria-hidden-body/\)](https://web.dev/aria-hidden-body/).

`[aria-hidden="true"]` elements do not contain focusable descendents

Focusable descendents within an `[aria-hidden="true"]` element prevent those interactive elements from being available to users of assistive technologies like screen readers. [\[Learn more\]\(https://web.dev/aria-hidden-focus/\)](https://web.dev/aria-hidden-focus/).

`[role]`s have all required `[aria-*]` attributes

Some ARIA roles have required attributes that describe the state of the element to screen readers. [\[Learn more\]\(https://web.dev/aria-required-attr/\)](https://web.dev/aria-required-attr/).

`[role]` values are valid

ARIA roles must have valid values in order to perform their intended accessibility functions. [\[Learn more\]\(https://web.dev/aria-roles/\)](https://web.dev/aria-roles/).

`[aria-*]` attributes have valid values

Assistive technologies, like screen readers, can't interpret ARIA attributes with invalid values. [\[Learn more\]\(https://web.dev/aria-valid-attr-value/\)](https://web.dev/aria-valid-attr-value/).

`[aria-*]` attributes are valid and not misspelled

Assistive technologies, like screen readers, can't interpret ARIA attributes with invalid names. [\[Learn more\]\(https://web.dev/aria-valid-attr/\)](https://web.dev/aria-valid-attr/).

Buttons have an accessible name

When a button doesn't have an accessible name, screen readers announce it as "button", making it unusable for users who rely on screen readers. [\[Learn more\]\(https://web.dev/button-name/\)](https://web.dev/button-name/).

The page contains a heading, skip link, or landmark region

Adding ways to bypass repetitive content lets keyboard users navigate the page more efficiently. [\[Learn more\]\(https://web.dev/bypass/\)](https://web.dev/bypass/).

Document has a `<title>` element

The title gives screen reader users an overview of the page, and search engine users rely on it heavily to determine if a page is relevant to their search. [\[Learn more\]\(https://web.dev/document-title/\)](https://web.dev/document-title/).

`[id]` attributes on active, focusable elements are unique

All focusable elements must have a unique `id` to ensure that they're visible to assistive technologies. [\[Learn more\]\(https://web.dev/duplicate-id-active/\)](https://web.dev/duplicate-id-active/).

ARIA IDs are unique

The value of an ARIA ID must be unique to prevent other instances from being overlooked by assistive technologies. [\[Learn more\]\(https://web.dev/duplicate-id-aria/\)](https://web.dev/duplicate-id-aria/).

`<frame>` or `<iframe>` elements have a title

Screen reader users rely on frame titles to describe the contents of frames. [\[Learn more\]\(https://web.dev/frame-title/\)](https://web.dev/frame-title/).

`<html>` element has a `[lang]` attribute

If a page doesn't specify a lang attribute, a screen reader assumes that the page is in the default language that the user chose when setting up the screen reader. If the page isn't actually in the default language, then the screen reader might not announce the page's text correctly. [Learn more](https://web.dev/html-has-lang/).

`<html>` element has a valid value for its `lang` attribute

Specifying a valid [BCP 47 language](https://www.w3.org/International/questions/qa-choosing-language-tags#question) helps screen readers announce text properly. [Learn more](https://web.dev/html-lang-valid/).

Image elements have `alt` attributes

Informative elements should aim for short, descriptive alternate text. Decorative elements can be ignored with an empty alt attribute. [Learn more](https://web.dev/image-alt/).

Form elements have associated labels

Labels ensure that form controls are announced properly by assistive technologies, like screen readers. [Learn more](https://web.dev/label/).

Lists contain only `<li>` elements and script supporting elements (`<script>` and `<template>`).

Screen readers have a specific way of announcing lists. Ensuring proper list structure aids screen reader output. [Learn more](https://web.dev/list/).

List items (`<li>`) are contained within `<ul>` or `<ol>` parent elements

Screen readers require list items (`<li>`) to be contained within a parent `<ul>` or `<ol>` to be announced properly. [Learn more](https://web.dev/listitem/).

`user-scalable="no"` is not used in the `<meta name="viewport">` element and the `maximum-scale` attribute is not less than 5.

Disabling zooming is problematic for users with low vision who rely on screen magnification to properly see the contents of a web page. [Learn more](https://web.dev/meta-viewport/).

No element has a `tabindex` value greater than 0

A value greater than 0 implies an explicit navigation ordering. Although technically valid, this often creates frustrating experiences for users who rely on assistive technologies. [Learn more](https://web.dev/tabindex/).

Best Practices

User Experience

Fonts with `font-display: optional` are preloaded

Trust and Safety

Includes front-end JavaScript libraries with known security vulnerabilities

Library Version Vulnerability Count Highest Severity

Array	3	Medium
-------	---	--------

Ensure CSP is effective against XSS attacks

Description		Directive Severity	
script-src directive is missing. This can allow the execution of unsafe scripts.		script-src	High
Missing object-src allows the injection of plugins that execute unsafe scripts. Consider setting object-src to 'none' if you can.		object-src	High

## General

## Detected JavaScript libraries

Name	Version
jQuery	3.1.1
Preact	10
Vue	2.6.11
boomerang.js	2.3.2
Shopify	
core-js	core-js-global@2.6.5; core-js-global@3.17.2; core-js-pure@3.0.0; core-js-global@2.6.2

Browser errors were logged to the console

## PASSED AUDITS

Uses HTTPS

All sites should be protected with HTTPS, even ones that don't handle sensitive data. This includes avoiding [mixed content](https://developers.google.com/web/fundamentals/security/prevent-mixed-content/what-is-mixed-content), where some resources are loaded over HTTP despite the initial request being served over HTTPS. HTTPS prevents intruders from tampering with or passively listening in on the communications between your app and your users, and is a prerequisite for HTTP/2 and many new web platform APIs. [Learn more](https://web.dev/is-on-https/).

Avoids requesting the geolocation permission on page load

Users are mistrustful of or confused by sites that request their location without context. Consider tying the request to a user action instead. [Learn more](https://web.dev/geolocation-on-start/).

Avoids requesting the notification permission on page load

Users are mistrustful of or confused by sites that request to send notifications without context.

Consider tying the request to user gestures instead. [Learn more](https://web.dev/notification-on-start/).

Allows users to paste into password fields

Preventing password pasting undermines good security policy. [Learn more](https://web.dev/password-inputs-can-be-pasted-into/).

Displays images with correct aspect ratio

Image display dimensions should match natural aspect ratio. [Learn more](https://web.dev/image-aspect-ratio/).

Serves images with appropriate resolution

Image natural dimensions should be proportional to the display size and the pixel ratio to maximize image clarity. [Learn more](https://web.dev/serve-responsive-images/).

Page has the HTML doctype

Specifying a doctype prevents the browser from switching to quirks-mode. [Learn more](https://web.dev/doctype/).

Properly defines charset

A character encoding declaration is required. It can be done with a `` tag in the first 1024 bytes of the HTML or in the Content-Type HTTP response header. [Learn more](https://web.dev/charset/).

Avoids deprecated APIs

Deprecated APIs will eventually be removed from the browser. [Learn more](https://web.dev/deprecations/).

Page has valid source maps

Source maps translate minified code to the original source code. This helps developers debug in production. In addition, Lighthouse is able to provide further insights. Consider deploying source maps to take advantage of these benefits. [Learn

more](https://developers.google.com/web/tools/chrome-devtools/javascript/source-maps).

No issues in the `Issues` panel in Chrome Devtools

Issues logged to the `Issues` panel in Chrome Devtools indicate unresolved problems. They can come from network request failures, insufficient security controls, and other browser concerns.

Open up the Issues panel in Chrome DevTools for more details on each issue.

100

## SEO

These checks ensure that your page is following basic search engine optimization advice. There are many additional factors Lighthouse does not score here that may affect your search ranking, including performance on [Core Web Vitals](#). [Learn more](#)

## CONTENT BEST PRACTICES

## CRAWLING AND INDEXING

### PASSED AUDITS

Has a `<meta name="viewport">` tag with `width` or `initial-scale`

A `<meta name="viewport">` not only optimizes your app for mobile screen sizes, but also prevents [a 300 millisecond delay to user input](https://developers.google.com/web/updates/2013/12/300ms-tap-delay-gone-away). [Learn more](https://web.dev/viewport/).

Document has a `<title>` element

The title gives screen reader users an overview of the page, and search engine users rely on it heavily to determine if a page is relevant to their search. [Learn more](https://web.dev/document-title/).

Document has a meta description

Meta descriptions may be included in search results to concisely summarize page content. [Learn more](https://web.dev/meta-description/).

Page has successful HTTP status code

Pages with unsuccessful HTTP status codes may not be indexed properly. [Learn more](https://web.dev/http-status-code/).

Links have descriptive text

Descriptive link text helps search engines understand your content. [Learn more](https://web.dev/link-text/).

Links are crawlable

Search engines may use `href` attributes on links to crawl websites. Ensure that the `href` attribute of anchor elements links to an appropriate destination, so more pages of the site can be discovered. [Learn More](https://support.google.com/webmasters/answer/9112205)

Page isn't blocked from indexing

Search engines are unable to include your pages in search results if they don't have permission to crawl them. [Learn more](https://web.dev/is-crawlable/).

robots.txt is valid

If your robots.txt file is malformed, crawlers may not be able to understand how you want your website to be crawled or indexed. [Learn more](https://web.dev/robots-txt/).

Image elements have `[alt]` attributes

Informative elements should aim for short, descriptive alternate text. Decorative elements can be ignored with an empty alt attribute. [Learn more](https://web.dev/image-alt/).

Document has a valid `hreflang`

hreflang links tell search engines what version of a page they should list in search results for a given language or region. [Learn more](https://web.dev/hreflang/).

Document has a valid `rel=canonical`

Canonical links suggest which URL to show in search results. [Learn more](https://web.dev/canonical/).

Document avoids plugins

Search engines can't index plugin content, and many devices restrict plugins or don't support them. [Learn more](https://web.dev/plugins/).

### Progressive Web App

These checks validate the aspects of a Progressive Web App. [Learn more](#)

Installable

Web app manifest or service worker do not meet the installability requirements

**Failure reason**

No manifest was fetched

PWA Optimized

Does not register a service worker that controls page and `start\_url`

Is not configured for a custom splash screen

Does not set a theme color for the address bar.

Content is sized correctly for the viewport

Does not provide a valid `apple-touch-icon`

Manifest doesn't have a maskable icon

**Additional items to manually check** - These checks are required by the baseline [PWA Checklist](<https://developers.google.com/web/progressive-web-apps/checklist>) but are not automatically checked by Lighthouse. They do not affect your score but it's important that you verify them manually.
